OBJECT

OBJECT

Nel borgo di Monte Marano, presso Benevento era morta una donna particolarmente devota di san Francesco. La sera vennero i chierici per le esequie e già apprestavano a celebrare la veglia con la recita dei salmi quando improvvisamente, alla vista di tutti, la donna si alzò sul letto e chiamò sacerdoti presenti, che era il suo padrino, e gli disse: \"Padre, voglio confessarmi. Ascolta il mio peccato. Quando sono morta, io dovevo essere gettata in un pozzo di fuoco, perché non avevo confessato il peccato che sto per dirti. Ma per tua misericordia ho pregato san Francesco, che durante la vita ho sempre servito con devozione. Mi è stato concesso di ritornare ora nel corpo, per confessare quel peccato e meritarmi la vita eterna. Dopo che lo avrò confessato, ecco, mi affretterò a riceverla l'assoluzione, si stese in pace sul suo letto e s'addormentò felicemente nel Signore\".

RDF: Resource Description Framework

- RDF is based on the idea of identifying things using Web identifiers (called Uniform Resource Identifiers, or URLs), and describing resources.
- A resource can be identified as a “thing” we want to talk about: a place, a person, a name, a webpage etc.
- Properties describe relationships between resource
- A statement about those resources is composed as triple in the form of <subject, predicate, object>

{Subject} + {Predicate} + {Object}

- Predicate have to be URI

RDF: Resource Description Framework

- Predicates can be URI or Literals
- Literals are atomic values (strings or dates)
- A data type tells us whether we should interpret a value as string, a date, integer or some other type. It is recommended practice to use the data types defined by XML Schema
 - decimals - “1.23” <<http://www.w3.org/2001/XMLSchema#decimal>>
 - dates - “1982-08-30”^^<<http://www.w3.org/2001/XMLSchema#date>>
 - String - “Giotto”

RDF: Resource Description Framework

- Predicates can be URI or Literals
- Literals are atomic values (strings or dates)
- A data type tells us whether we should interpret a value as string, a date, integer or some other type. It is recommended practice to use the data types defined by XML Schema
 - decimals - “1.23” <<http://www.w3.org/2001/XMLSchema#decimal>>
 - dates - “1982-08-30”^^<<http://www.w3.org/2001/XMLSchema#date>>
 - String - “Giotto”

RDF: Resource Description Framework

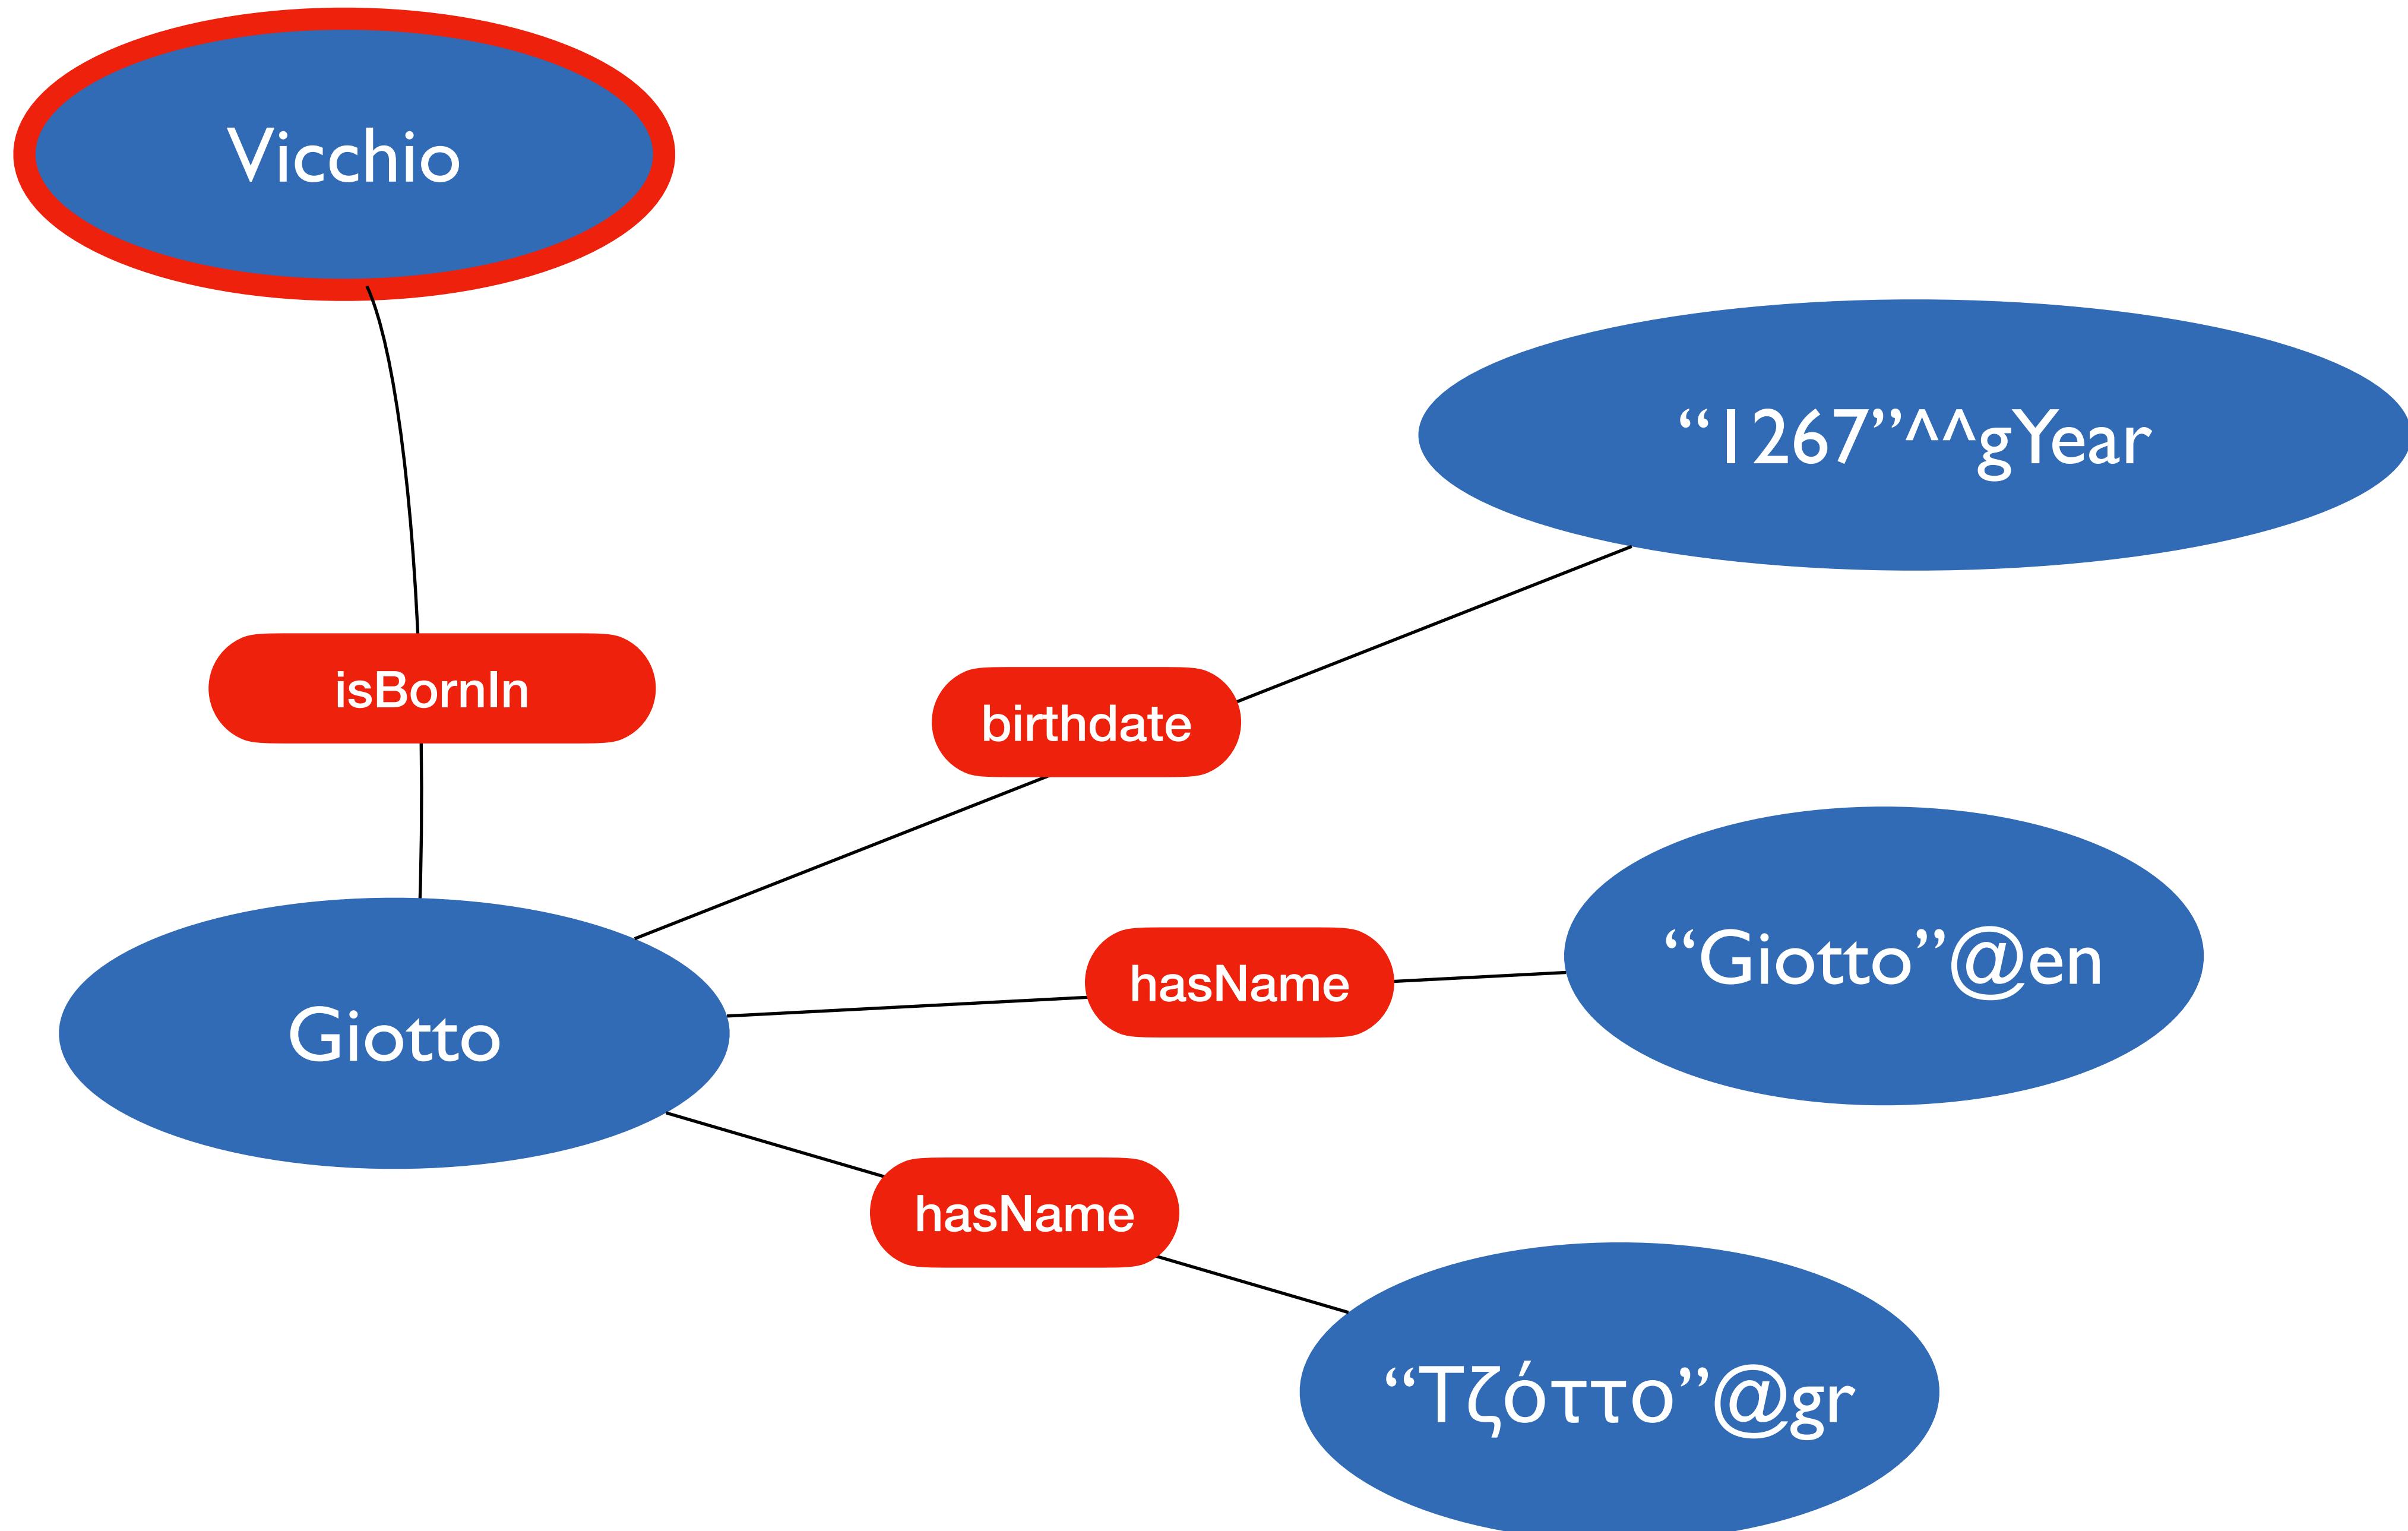

- Subject have to be a URI or a blank node
- Object can be a URI or a Literal (string) or a blank node
- Predicate have to be URI

RDF: Resource Description Framework

- Blank nodes
- Subject and object can be blank nodes
- Blank nodes are difficult to work with
- Blank nodes are difficult to work with!
- Blank nodes are difficult to work with because it is difficult to refer to them outside the local data. How can we merge data with blank nodes?
We assign them fake identity.
- Please be kind, assign fake identity to blank nodes.

RDF

- Structure in triples <subject, predicate, object>
- concept of property (predicate)
- Using Literals
- reification...
